

Start here. Jireh Profits Prop Demo

A clear path from zero experience to a working MetaTrader 5 demo —
broker or prop access, chart, and the Prop Demo Expert Advisor —
This pack is MetaTrader 5 only.

01 · Prep

Gear & access

PC, internet, broker/prop login, Prop Demo file, quiet time.

02 · Platform

Install MT5

Demo account, leverage basics, Market Watch connected.

03 · Attach

Run Prop Demo

EURUSD H1 → drag EA → green Algo Trading → smoke check.

ROADMAP — 18 SHEETS IN THIS PACK

1

Start here

You are on Sheet 01. Read the path once, then follow in order.

2

What you need

Checklist before you click Install.

3

Computer & hardware

Laptop OK? Multi-terminal RAM. Don't sleep through trades.

4

Suggested brokers

US-friendly options + OX Securities. Prop may supply MT5.

5

Prop firm path

Challenge vs funded vs personal — keep rules separate.

6

Create demo

Signup steps and suggested practice balance.

7

Leverage explained

What 1:30 / 1:100 means in plain English.

8

Install MetaTrader 5

Official download and first launch.

9

Log into the account

Server, login, password, connection check.

10

Install Prop Demo .ex5

Data Folder → MQL5\Experts → Refresh.

11

Open EURUSD H1

Market Watch + timeframe.

12

Drag EA + inputs

Allow Algo Trading checkbox → OK.

13

Green Algo button

Toolbar on vs off — common mistakes.

14

Smoke check

Experts tab, attached name, connection.

15

VPS suggested

Always-on for real/prop; provider ideas.

16

Demo → live readiness

Checklist before real capital.

17

Multi-account tips

This pack is MetaTrader 5 only.

18

Quick reference

One-page install cheat sheet.

What you need. Checklist

Gather these before you install. A missing login or a missing .ex5 is the usual reason the first session stalls.

A Hardware. Windows PC or laptop. SSD preferred.

B Access. Broker demo or prop-firm login: number, trade password, and the exact server name.

C Software. MetaTrader 5, plus Jireh-Profits-Prop-Demo.ex5 from EA Lab or the Prop Demo download page.

D Time. 45 to 90 quiet minutes for the first install.

CHECKLIST

PC awake. About 2 GB free for MetaTrader 5, plus room for chart history. Stable internet. Credentials ready. .ex5 saved. Permission to install programs. Password manager for the server name. Do not put the password in a shared chat.

PRIVACY

Server name is the exact name from the broker or prop email. Trade password is for placing trades. Investor password is watch-only. Keep both in a password manager.

If the prop firm supplies its own MetaTrader 5 installer and server, use those. The attach steps stay the same.

After Sheet 14: MetaTrader 5 open, EURUSD on H1, Prop Demo on the chart, Algo Trading on.

Suggested computer. **Hardware**

You do not need a gaming PC. You need enough memory, an SSD, and a power plan that does not sleep the terminal.

Laptop: fine for learning. Do not sleep or hibernate while the terminal must stay connected. Closing the lid ends the session.

One MetaTrader 5 terminal: 8 GB RAM, SSD, a modern dual-core CPU.

Three or four MetaTrader 5 terminals: 16 GB RAM, quad-core, SSD. Size the machine for the busiest day.

- 1 CPU: dual-core for one terminal; quad-core when several terminals are open.
- 2 RAM: 8 GB for one terminal; 16 GB for three or four.
- 3 Storage: SSD, with 10 GB free so chart history does not crawl.
- 4 Display: one large monitor, or two, so Market Watch, the chart, and Toolbox are readable together.
- 5 Power: never sleep while plugged in during a session that must stay connected.
- 6 Always-on: do not leave an overnight prop or live terminal on a sleeping laptop. Use a VPS (Sheet 15).

CALLOUT

A VPS is a remote Windows computer that stays on when the laptop is closed. Sheet 15 covers it. This sheet is still one MetaTrader 5 terminal.

Suggested brokers. Incl. OX Securities

Pick a path that gives you MetaTrader 5 and a demo or prop login. This pack is MetaTrader 5 only.

Option A. Personal broker demo. A practice account so you can install and attach without real capital.

Option B. OX Securities is one starting point. Confirm they still offer a MetaTrader 5 demo for your country before you spend time on signup.

Option C. Prop firm MetaTrader 5. If you are on a challenge or funded seat, use the firm's installer, server, and written rules.

- 1 Confirm MetaTrader 5, not only MT4 or a web terminal.
- 2 Confirm a demo.
- 3 Read how they describe licensing. This is education, not legal advice.
- 4 For training, judge stable demo quotes and a support channel.
- 5 Support must be able to tell you the server name.
- 6 A prop seat overrides a personal broker.

Jireh Profits does not require one exclusive broker. Suggestions are starting points, not a requirement and not an endorsement. Availability and jurisdiction must be rechecked.

Write down firm name, server, and login. Keep the password in a password manager.

Prop firm path. **How seats differ**

A prop account is conditional buying power under a ruleset. A practice demo is for learning the install. Keep them separate.

Challenge: evaluation. Daily loss, max drawdown, and sometimes news limits.

Funded: still rules-bound. Payout rules belong to that firm. This pack does not promise a payout.

Personal account: your capital and your broker. Different limits from a prop seat.

- 1 Use the login, password, and server from the prop portal. Do not invent a server.
- 2 You may learn the attach on a broker demo. On a prop seat, install again on that seat's MetaTrader 5.
- 3 Read that firm's rules before any attach on a prop account.
- 4 Label the terminal window: Broker demo, learning, or Prop seat A.

POSTURE

This pack is an install rehearsal. It does not promise a challenge pass or a payout.

Create demo / sign up. **Step-by-step**

Get a practice account so the later sheets are hands-on. Suggested demo balance: 10,000 to 100,000 in the account currency. That is enough to see margin. It is not a performance test.

Balance 10,000–100,000. OX: use their Open Demo / MetaTrader 5 path and store the server string. After signup: email with login, then Sheet 08 and Sheet 09.

- 1 Open the official broker or prop site and bookmark it.
- 2 Choose Open Demo or Practice. Do not fund a live account until Sheets 01 through 14 are done on a demo.
- 3 Platform: MetaTrader 5.
- 4 Pick one practice balance in that range and keep it for the session.
- 5 Save the email: login, trade password, and server name.
- 6 OX Securities: use their Open Demo / MT5 path and store the server string.
- 7 Prop portal: download their MetaTrader 5 and copy credentials from the dashboard.
- 8 Then go to Sheet 08 (install) and Sheet 09 (login).

HYGIENE

Do not share the trade password in a group chat. If you screen-share, crop the login dialog after you are connected.

Leverage & ratio. Explained

Leverage is how much exposure the margin can support. Read it before you size anything, especially on a prop seat.

1:30 means about 1 unit of margin can support about 30 units of notional. Illustration only, not a target.

1:100 is the same idea with more exposure per unit of margin. Illustration only, not a target.

You do not need high leverage to learn how to attach Prop Demo.

- 1 Leverage is a ratio, not a goal.
- 2 When a position opens, the platform holds margin. Free margin is what remains. If losses shrink equity, the margin level falls.
- 3 Demo leverage is often higher than a prop seat allows. Use the rules of the account you will actually trade.
- 4 On the demo, open a small position and watch Balance, Equity, Margin, Free Margin, and Margin Level % on the Trade tab.
- 5 Size so a normal adverse move still fits the account's limits.

TRADE TAB

Trade tab labels to read: Balance, Equity, Margin, Free Margin, Margin Level %.

Install MetaTrader 5. **Official path**

Install from the broker or prop firm that issued the login. Do not use a random third-party mirror.

- 1 Download their MetaTrader 5 installer.
- 2 Run setup. Keep the default folder unless the firm specifies a portable path.
- 3 Launch MetaTrader 5 from the Start menu or the desktop shortcut.
- 4 If you already have credentials, choose login to an existing account (Sheet 09). Do not open a second unwanted live account.
- 5 If Windows asks, allow MetaTrader 5 on private networks so quotes can connect.
- 6 Ready looks like this: a chart, Navigator (Ctrl+N), Market Watch (Ctrl+M), and Toolbox (Ctrl+T).

NAVIGATOR / CHART / TOOLBOX

Navigator lists Expert Advisors. The chart can be empty for now. Toolbox sits along the bottom.

Some prop kits are a folder you open, not a setup wizard. File, Open Data Folder still works the same on Sheet 10.

Next is Sheet 09. Log in so Market Watch ticks.

Log into the account. **Server · Login · Password**

Three fields: Login, Password, Server. The server name is the exact string from the broker or prop, not a name you invent.

- 1 File, Login to Trade Account. Or use the prompt on first launch.
- 2 Login: the numeric account number from the email or portal.
- 3 Password: the trade password. An investor (read-only) password can watch but cannot trade.
- 4 Server: the exact string from the broker or prop. Use Search if the list is long.
- 5 Click Login. The bottom status line should show the server without No connection.
- 6 Market Watch (Ctrl+M) should tick. If the list is empty, right-click, Show All.

LOGIN DIALOG

Dialog fields, in order: Login, Password, Server, then Login. Connected look: server name on the bottom bar, account under Navigator, quotes ticking in Market Watch.

If you screen-share, crop the login dialog after you are connected. The connection status matters more than the digits.

Install Prop Demo. **.ex5** into Experts

File name: Jireh-Profits-Prop-Demo.ex5. The data folder is the folder this running terminal uses. It is not the Program Files install folder.

- 1 Download Jireh-Profits-Prop-Demo.ex5 from EA Lab or the Prop Demo download page.
- 2 In the running terminal: File, Open Data Folder.
- 3 Open MQL5, then Experts. Expert Advisors live here. Not Indicators. Not Scripts.
- 4 Paste Jireh-Profits-Prop-Demo.ex5 into Experts.
- 5 Navigator (Ctrl+N), Expert Advisors, right-click, Refresh. Or restart the terminal.
- 6 You should see Jireh Profits Prop Demo under Expert Advisors.

File → Open Data Folder → MQL5 → Experts → paste Jireh-Profits-Prop-Demo.ex5 → Navigator → Expert Advisors → Refresh.

COMMON MISS

Common miss: copying into the program-files install folder. Always start from File, Open Data Folder on the terminal you are logged into.

Next: Sheet 11 opens the chart. This pack has no EA source code.

Open EURUSD. Chart · H1

This training uses the account's main euro-dollar symbol on H1 so the attach path is the same for everyone.

- 1 Market Watch: Ctrl+M, or View, Market Watch.
- 2 Find EURUSD. If it is missing, right-click Market Watch, Show All.
- 3 Some brokers add a suffix, such as EURUSD.r or EURUSDm. Pick the main euro-dollar symbol that account actually quotes.
- 4 Right-click that symbol, Chart Window. Or drag it onto the chart area.
- 5 Set the timeframe to H1. Toolbar button H1, or right-click the chart, Timeframes, H1.
- 6 Close extra charts so you attach Prop Demo only where you mean to.

H1 TOOLBAR

Timeframe row includes H1. Select H1 for this training.

A symbol suffix is extra letters the broker adds. EURUSD.r and EURUSDm are still the euro-dollar pair when that is the symbol this account quotes.

Next: Sheet 12, drag the EA onto this chart.

Drag EA to chart. **Inputs · Allow Algo**

Drag Jireh Profits Prop Demo onto the EURUSD H1 candles. On Common, Allow Algo Trading is on and Allow DLL imports is off.

- 1 Click the EURUSD H1 chart so it is the active window.
- 2 Navigator, Expert Advisors, Jireh Profits Prop Demo.
- 3 Drag that name onto the EURUSD H1 candles.
- 4 The dialog opens on Common and Inputs.
- 5 On the Common tab, turn Allow Algo Trading on.
- 6 Leave Allow DLL imports off. This install rehearsal does not need DLL imports.
- 7 Inputs: leave the defaults unless a written demo instruction says otherwise.
- 8 Click OK.

Allow Algo Trading: on.
Allow DLL imports: off.
Inputs: defaults unless written demo instructions say otherwise.

After OK, the chart corner shows the EA name.

A sad face usually means algorithmic trading is still disabled. Sheet 13 is the toolbar button.

IF NOTHING HAPPENS

If the name never appears, you dropped it on the wrong window, or Navigator was not refreshed after the copy (Sheet 10).

Green Algo Trading. **Toolbar on vs off**

The toolbar Algo Trading button must be on. An attached EA with that button off will not manage orders. This is the usual first-day miss.

ON

On: Algo Trading shows on. The EA may manage orders only under its permissions.

OFF

Off: the EA can stay on the chart while algorithmic trading is blocked.

- 1 Find Algo Trading on the top toolbar. Older builds say AutoTrading.
- 2 Click it until it shows on. Leave it on for the smoke check.
- 3 Recheck the face icon on the chart.
- 4 Also check: Allow Algo Trading was on in the attach dialog, the password is the trade password, the chart is the chosen symbol, and the server is connected.
- 5 Optional: Tools, Options, Expert Advisors. Allow algorithmic trading should be checked. Then toggle the toolbar button on.

TOOLBAR

Toolbar control to confirm: Algo Trading on.

SAFETY

Algo Trading off is the fast stop on that terminal. This sample is a demo install rehearsal. Do not attach it to a scored prop seat until you are told this build is the one for that seat.

Smoke check. **Experts · connection**

Confirm the install. Do not change Inputs to force a result.

- 1 Toolbox (Ctrl+T), Experts. Look for load lines from Jireh Profits Prop Demo. Read red errors. They are often permissions or the symbol.
- 2 The chart corner shows the EA name. If it does not, re-attach (Sheet 12).
- 3 Bottom-right: connected to the server. No connection means fix the network or the login before anything else.
- 4 Algo Trading is on (Sheet 13).
- 5 Market Watch: the EURUSD symbol you chose is updating bid and ask.
- 6 Optional: Toolbox, Journal, for login and connection notes.

PASS

Pass for this training: connected, EURUSD H1 open, Prop Demo on the chart, Algo Trading on, Experts tab shows a clean load.

FAIL PATH

If something fails, work backwards: connection, file in Experts, refresh, attach flags, Algo button.

This check is the install, not a performance review.

VPS suggested. **Always-on path**

A VPS is a remote Windows desktop you reach with Remote Desktop. Use one when the terminal must stay online after you close the laptop. Learn the attach on the local demo first (Sheets 08 to 14).

Why: laptops sleep. Size: one terminal, or two to four. Examples are not endorsements.

- 1 Move off the laptop when the session must survive a closed lid.
- 2 Install MetaTrader 5 on that remote Windows desktop and connect with Remote Desktop.
- 3 Examples people compare: ForexVPS, Beeks, and a general Windows cloud such as Amazon Lightsail. These are examples, not endorsements.
- 4 One terminal: about 1 to 2 vCPU and 2 to 4 GB RAM. Two to four terminals: 2 to 4 vCPU and 8 GB RAM or more, on SSD.
- 5 Strong Remote Desktop password. Do not store passwords in a shared folder. Do not email the .ex5 and the account password together.
- 6 Copy the same .ex5 onto the VPS only after the local demo smoke check passes.

This pack contains no account passwords. Keep Windows and MetaTrader 5 updated on that machine.

Demo → live / prop. **Readiness checklist**

Before real capital or a scored prop seat, confirm the operations. This is not a promise about results.

- You can repeat Sheets 10 to 14 without this guide.
- For a prop seat you have read daily loss, max drawdown, news, and lot caps.
- For your own account you have written limits.
- You have decided where the terminal lives.
- Local is fine only if you accept sleep and disconnect.
- Otherwise use Sheet 15.
- You have a second copy of Jireh-Profits-Prop-Demo.ex5 outside the terminal data folder.
- Demo, prop, and personal logins are labeled.
- You ran the Sheet 14 smoke check on the target terminal after that login.
- You know the stop: Algo Trading off, and how to close the terminal or the VPS session.
- You know how you will reach Jireh Profits or the prop helpdesk if the attach fails on day one.

READINESS

Readiness is operational: rules, backup, uptime, labels, kill switch, and support. Do not attach this sample to a scored prop seat until you are told this build is the one for that seat.

Multi-account tips. **MetaTrader 5 only.**

Finish one MetaTrader 5 attach before you open another terminal. This pack is MetaTrader 5 only.

Now: one MetaTrader 5 terminal, with Prop Demo attached and the smoke check passed.

Name the shortcuts: MT5 Broker Demo, MT5 Prop Seat A. That prevents opening the wrong data folder.

Add another MetaTrader 5 terminal only after the first one is stable. If two already stutter, stop.

- 1 Finish one MetaTrader 5 attach first.
- 2 Window layout: Market Watch and the chart on the main screen. Toolbox visible. A second screen can hold the portal.
- 3 If two terminals stutter, add RAM or move to a VPS before a third.
- 4 Several accounts can still meet the same news event. Size and schedule still matter.
- 5 Leave space between windows so you do not drag an EA onto the wrong chart.
- 6 A multi-terminal day means plugged in, sleep disabled, or a VPS.

Quick reference. **Cheat sheet**

The attach path on one page.

- 1 Download Jireh-Profits-Prop-Demo.ex5 from EA Lab or the Prop Demo download page.
- 2 File, Open Data Folder, MQL5, Experts. Paste the .ex5. Not Indicators.
- 3 Navigator, Expert Advisors, Refresh.
- 4 Chart: EURUSD, or the broker suffix such as EURUSD.r or EURUSDm. Timeframe H1.
- 5 Drag Jireh Profits Prop Demo onto that chart. Allow Algo Trading on. DLL imports off. OK.
- 6 Toolbar: Algo Trading on.
- 7 Experts tab clean, server connected, EA name on the chart.

One line: download, Data Folder Experts, refresh, EURUSD H1, drag, Algo on, smoke check.

Demo install rehearsal only. Do not put this sample on a scored prop seat until you are told this build is the one for that seat.

Product name: Jireh Profits Prop Demo. File: Jireh-Profits-Prop-Demo.ex5.
