

Green Algo Trading. **Toolbar on vs off**

The toolbar Algo Trading button must be on. An attached EA with that button off will not manage orders. This is the usual first-day miss.

ON

On: Algo Trading shows on. The EA may manage orders only under its permissions.

OFF

Off: the EA can stay on the chart while algorithmic trading is blocked.

- 1 Find Algo Trading on the top toolbar. Older builds say AutoTrading.
- 2 Click it until it shows on. Leave it on for the smoke check.
- 3 Recheck the face icon on the chart.
- 4 Also check: Allow Algo Trading was on in the attach dialog, the password is the trade password, the chart is the chosen symbol, and the server is connected.
- 5 Optional: Tools, Options, Expert Advisors. Allow algorithmic trading should be checked. Then toggle the toolbar button on.

TOOLBAR

Toolbar control to confirm: Algo Trading on.

SAFETY

Algo Trading off is the fast stop on that terminal. This sample is a demo install rehearsal. Do not attach it to a scored prop seat until you are told this build is the one for that seat.
