

Multi-account tips. **MetaTrader 5 only.**

Finish one MetaTrader 5 attach before you open another terminal. This pack is MetaTrader 5 only.

Now: one MetaTrader 5 terminal, with Prop Demo attached and the smoke check passed.

Name the shortcuts: MT5 Broker Demo, MT5 Prop Seat A. That prevents opening the wrong data folder.

Add another MetaTrader 5 terminal only after the first one is stable. If two already stutter, stop.

- 1 Finish one MetaTrader 5 attach first.
- 2 Window layout: Market Watch and the chart on the main screen. Toolbox visible. A second screen can hold the portal.
- 3 If two terminals stutter, add RAM or move to a VPS before a third.
- 4 Several accounts can still meet the same news event. Size and schedule still matter.
- 5 Leave space between windows so you do not drag an EA onto the wrong chart.
- 6 A multi-terminal day means plugged in, sleep disabled, or a VPS.
